With the blowpipe, analytical tests are applied directly to the mineral and are quickly carried out with very little material and with very simple, easily portable

apparatus and reagents. Blowpipe analysis is sometimes called “dry-way” analysis. It can be carried out easily in the field by a prospector. Technique

The test is sometimes used to identify the metals in minerals. In this case, a mineral-coated bead is heated in a flame and cooled to observe its characteristic color. The bead test may be used on its own in chemical analysis but it's more

common to use it in conjunction with the flame test to better identify the composition of the sample.
