Longitudinal Waves. Launch Gizmo. Observe the propagation of longitudinal (compression) waves in a closed or open tube with evenly-spaced dividers. The strength and frequency of the waves can be manipulated, or waves can be observed as individual pulses. Compare the movement of dividers to graphs of displacement, velocity, acceleration and pressure.

A source vibrates up and down and back and forth, causing air molecules to move in a circular motion as the wave is D. A source ejects a ring of high-velocity air molecules that travel from the source to a listener. Explanation: A sound wave is an example of a longitudinal wave, in which the particle movement is in the same direction as the wave. As a sound source vibrates forward, the molecules next to the source are pushed together, forming a compression.
